Lisp is Cool!

3D is Cool!

Except for 3D Pitfall, which looks really lame.

Getting Started

1. Install Linux.

`http://aptosid.com`

2. Install SBCL.

```
apt-get install sbcl{,-doc,-source} \  
cl-{asdf,cffi}
```

3. Install Emacs and SLIME *(Not strictly required.)*

```
apt-get install emacs,-goodies-el cl-swank \  
cl-swank slime common-lisp-controller
```

4. Install OpenGL.

```
apt-get install libgl1-mesa-dev \  
libglu1-mesa{,-dev} libglut3{,-dev} ...
```

Extra Libraries

- Σ , my library of random useful things in Common Lisp.
<https://github.com/cgore/sigma>
- cl-opengl, or else we need to do a lot more work.
<https://github.com/3b/cl-opengl>
